

Baby Blood Assist

A new patient safety app

Sam Timmins, Patient Blood Management Practitioner, NHS Blood and Transplant

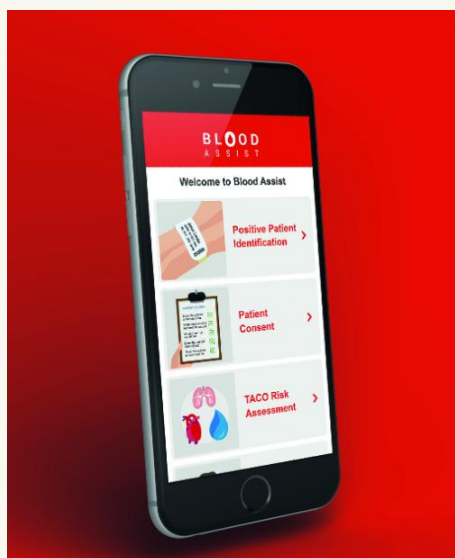

Baby Blood Assist

A blood component administration app, specifically for paediatric and neonatal patient care. Designed to support bedside transfusion practice and supplement local policy and training.

Concept

- Build on and compliment the success of it's sister app- Blood Assist

- Provide paediatric and neonatal tailored transfusion guidance in a safe and effective way

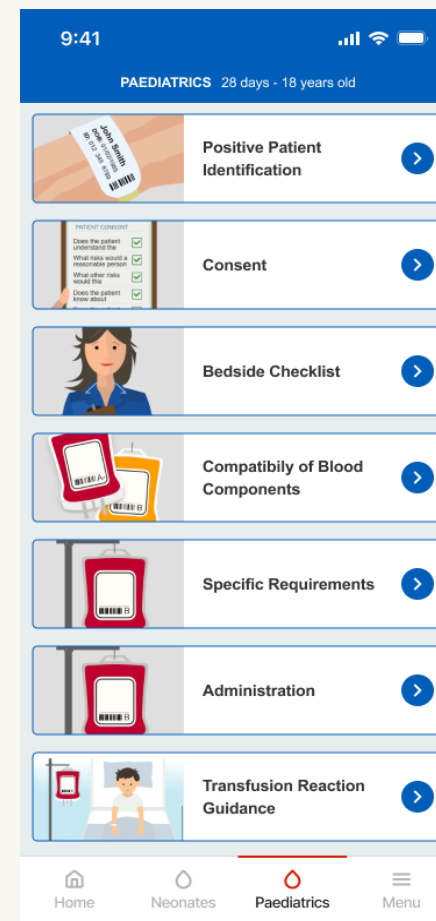

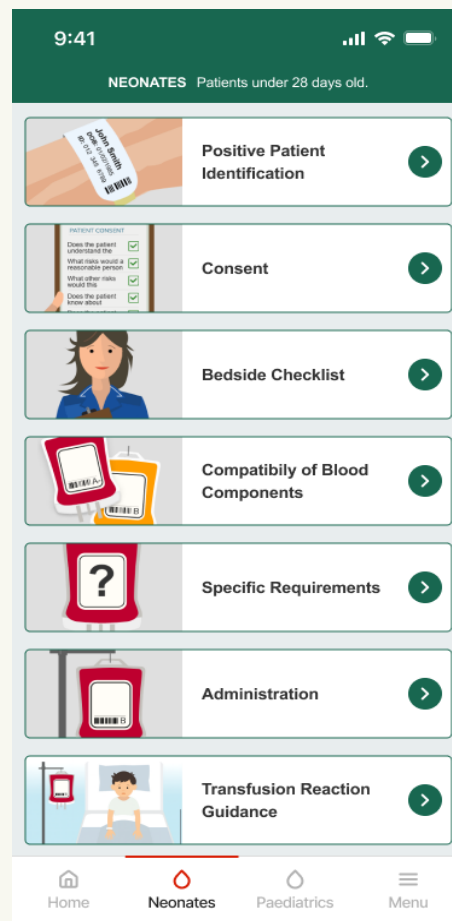

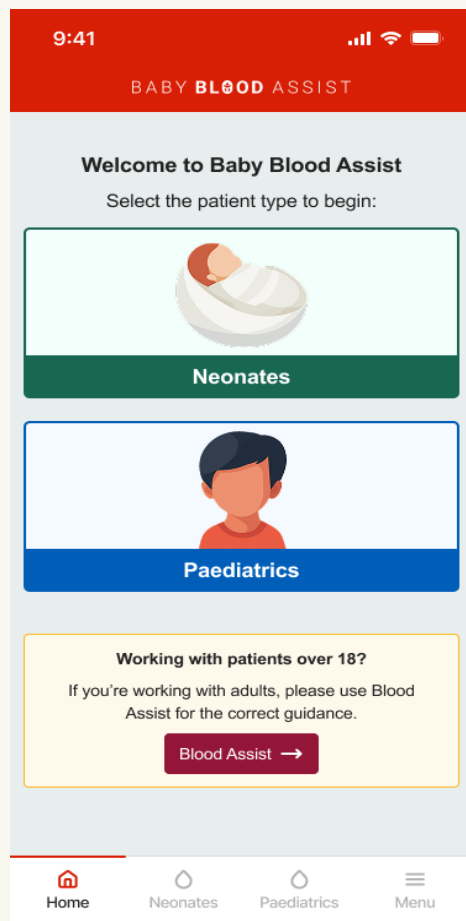

- Easy access to reliable up to date national guidance and information

- Aims to improve patient safety, reduce costs associated with errors and increase staff confidence

Content

* Design and layout subject to change pending final quality checks and sign off

Development

Broad range of SME's involved in authoring content

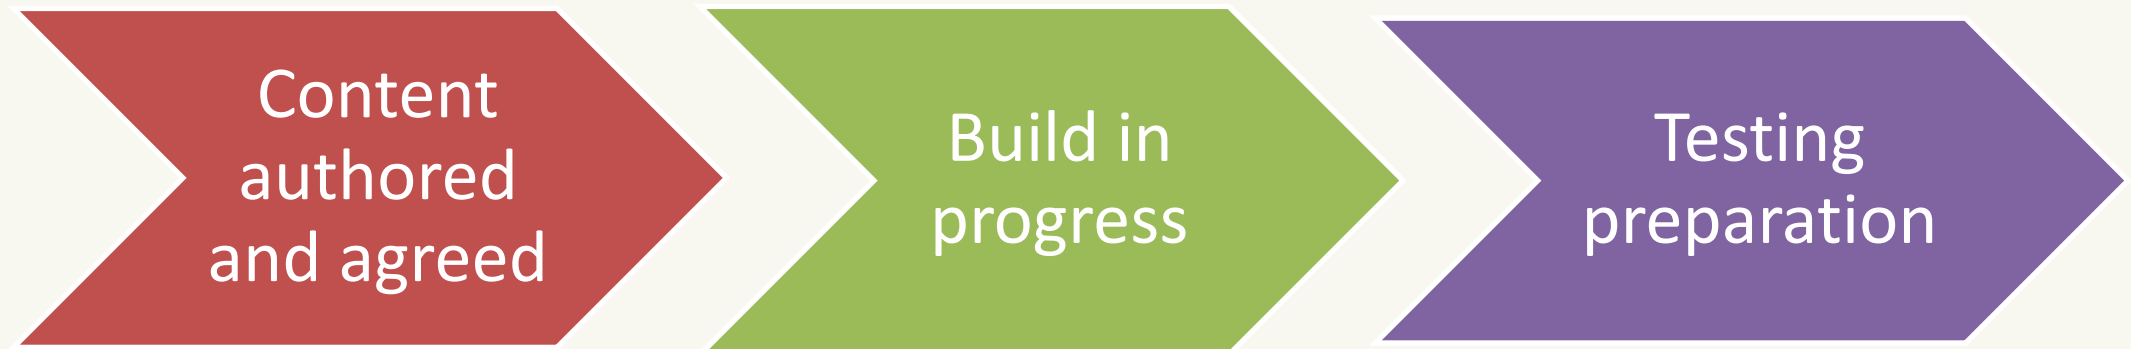

Secured preferred, experienced digital developer

Robust quality and user experience testing plan

Progress

Next Steps

- Complete functional testing and quality sign off
- Carry out user experience testing
- Finalise development
- Prepare for “Go Live”!
- Collect feedback and lessons learned
